

Chapter 6021

When Charlie arrived in Aurous Hill, it was already past ten o'clock in the evening, time.

After Charlie passed the customs and completed the immigration procedures,

He went directly to the VIP passage from inside the airport,

Took the special plane of the Wade family that had been waiting for a long time,

And took off in the night, heading for Eastcliff.

Because Charlie's grandfather was openly conducting in-depth investment cooperation with the government in Eastcliff during this period,

Charlie was worried that Victoria's men would monitor Eastcliff's entry information,

So he decided to enter the country in Aurous Hill.

After entering Aurous Hill, he can then go to Eastcliff to bypass the international terminal and customs in Eastcliff.

There are hundreds or thousands of domestic flights in Eastcliff every day.

These passengers will definitely not be the target group monitored by the Warriors Den.

Charlie went to Eastcliff this time for only one purpose,

Which was to meet his grandfather, synchronize him with the situation in New York,

And discuss the next countermeasures.

Knowing that Charlie was coming tonight,

Charlie's uncles Marshal and Duncan drove to the airport an hour in advance to greet him.

Charlie took off from Aurous Hill and landed in Eastcliff two hours later.

There was no need to go through customs for domestic flights,

So the plane taxied directly to the hangar after landing.

The uncle and Duncan had been waiting in the hangar for a long time.

The car they drove was parked here.

The two of them were smoking outside the car guarding a trash can with an ashtray.

They saw that the plane Charlie was on was finally slowly dragged into the hangar.

In the hangar, both of them were happy.

They threw their cigarette but.ts into the ashtray and strode towards the hatch.

The cabin door opened, Charlie stepped off the plane,

And the two of them immediately greeted him.

"Charlie!"

"Mr. Wade!"

When the two saw Charlie, their happiness was beyond words.

Charlie also smiled and responded: "Uncle, Inspector Li."

Marshal smiled and patted Charlie's shoulder, and asked with a smile:

"You must be tired after traveling for so long, right?"

Charlie smiled and said: "I'm not tired. I no longer feel tired."

"That's good." Marshal nodded and said quickly:

"Your grandpa knows that you came to Eastcliff tonight and has been waiting for you without sleeping."

"If you're tired, let's hurry up and go there first."

"Okay!" Charlie agreed without hesitation,

And then got into the car driven by the two of them.

Charlie noticed that the license plate number of this car was very special.

It seemed to be a special number section that is common in the capital, so he asked:

"Uncle, where did you get this car?"

Marshal drove out of the hangar While answering:

"This is specially applied for by the department that receives our investment."

"It is mainly taken care of by the security department, and the safety factor is high."

After saying that, Marshal added: "The old man has been addicted to spending money recently."

"The total amount of cooperation discussed during this period has exceeded 100 billion U.S. dollars."

"They are all promising local industries and their coverage is very wide."

"In a few days, your second uncle and I will go to the south."

"We will invest in a lithium battery. The company is planning to build a top-level power lithium battery production and R&D base in the south,"

"Specializing in the development of high-density power lithium batteries required for new energy vehicles."

"Next, your second uncle also plans to directly build a new energy vehicle brand and leverage on domestic."

"The top supply chain in the new energy field is directly engaged in vehicle manufacturing."

Charlie asked curiously: "It seems that An family has not been involved in the manufacturing industry before."

"Why did it directly engage in vehicle manufacturing this time?"

"This industry has a long investment cycle."

"It also takes up a lot of energy, and the profit margins are not very optimistic."

Marshal explained with a smile: "New energy is indeed the general direction of future automobile development."

"The world is promoting carbon neutrality and meeting carbon standards."

"New energy companies are the top priority to achieve carbon standards."

"Moreover, the cost of clean energy is lower and it does not rely on imports."

"It can greatly alleviate the demand for oil imports."

"In the future, the cost of fossil fuels will become higher and higher,"

"And the advantages of new energy will become even greater."

"It's becoming more and more obvious."

As he spoke, Marshal added: "To put it bluntly, the old man still hopes to invest in industry."

"Industry can create more jobs and integrate more labor and resources for packaging."

"The benefits of upgrading will be greater, and if it can promote the upgrading of the entire industry, that would be even better."

Charlie nodded understandingly and said:

"Grandpa's investment this time put returns second."

Marshal said: "The old man said that for any project, the first consideration is how much substantial help it can bring to China;"

"The second consideration is how much it can improve China's influence in this field;"

"The third consideration is it is the profit and return of the project."
